

General info

CP 0044 is a powerful, direct driven 4 Hp pneumatic saw. Designed to cut a variety of materials such as concrete, asphalt and stone. The direct drive eliminates the need for continuously checking the drive belt tension. The saw is designed for precise balance so less effort is needed to do the job at hand. A built-in oiler provides for continuous lubrication to reduce the service down time. The 44 is designed with safety in mind using a lock-off trigger to help prevent accidental starting. Also the blade guard can be operated with one hand for convenience.

Applications

The market for saws is dominated by petrol driven saws but there is a market for pneumatic saws for example for indoor applications, especially in hazardous environments where the use of gasoline driven tools is forbidden, in foundries for example.

The CP air driven saw is also appreciated because it is powerful and has a very low maintenance cost.

Key features

- Directly driven (no-belt) by 4 Hp motor
- Built-in oiler
- Standard lock-off trigger to prevent accidental starting
- Two position handle
- Normally used with 12" (300 mm) or 14" (350 mm) blades with 1" (25.4 mm) arbor diameter.
- Lock-off trigger
